MB-Active Trap for URIMAT Urinals

Code: 52102
EAN: 4260092755042

The URIMAT MB-Active replacement trap is designed for URIMAT waterless urinals and urinals from other manufacturers. Equipped with a vertically closing membrane system, an integrated MB ActiveCube filter cartridge, and a visual replacement indicator. The service life of the trap is 6,000–8,000 uses. Made from 50% recycled material.

Technical information

About the product

Product type	Replacement Siphon
Category	Urinal Accessories
Brand	Urimat
EAN	4260092755042

Other

About the Product	Replaceable Urimat MB Active Trap siphon. Service life: 6,000–8,000 uses (visual indicator shows when replacement is required). Integrated with MB ActiveCube. Designed for Urimat urinals and compatible urinals from other manufacturers. Made from 50% recycled material. Features a vertically closing membrane system that provides complete protection against unpleasant odours. The membrane compensates for both negative and positive pressure, preventing sewer gases from escaping.

Description

MB-Active Trap for Waterless Urinals – Application and How It Works

The URIMAT MB-Active Trap is **a replaceable diaphragm trap designed for waterless urinals**. Its purpose is to drain urine into the sewer system while preventing gases and unpleasant odors from escaping from the sewer system into the room.

The trap uses **a vertically closing diaphragm**. The flow of liquid causes it to open, and once the urinal is emptied, the diaphragm closes again, creating a mechanical barrier between the urinal and the sewer system. The diaphragm’s design also compensates for pressure changes in the system.

Key Information:

- **Type:** Replaceable diaphragm trap for waterless urinals
- **Application:** URIMAT urinals and compatible urinals from other manufacturers
- **Closure system:** vertical check valve to prevent the backflow of sewer gases
- Service **life:** approximately 6,000–8,000 uses

- **Wear monitoring:** a visual indicator that shows when the trap needs to be replaced
- **MB ActiveCube:** a cube integrated with a trap that helps reduce the formation of organic deposits
- **ActiveCube Adjustment:** a three-level system that allows you to adjust the intensity of the cube's operation
- **Resistance to pressure changes:** the diaphragm compensates for negative and positive pressures occurring in the sewer system
- **Material:** 50% recycled material
- **Product code:** 52102

How does the MB-Active trap work?

When using the urinal, the liquid flowing into the drain **opens a vertical membrane and enters the sewer system**. Once the flow stops, the membrane closes automatically. This creates a sealed barrier between the room and the sewer system, limiting the escape of gases and unpleasant odors.

When should you replace a P-trap?

The expected service life of a single siphon is **approximately 6,000–8,000 uses**. You don’t need to estimate the number of cycles yourself—a visual indicator located under the transparent cover lets you know when it’s time to replace it.

Does the trap fit only URIMAT urinals?

No. The MB-Active trap is designed for **URIMAT urinals, but it can also be used in compatible urinals from other manufacturers**. Before installing it in a different urinal model, make sure that the urinal’s design and drain are compatible with this type of trap.
